

CS 120 Web Programming JSON Assignment Deliverables

- ☐ Json.html, json1.html, json2.html, json3.html, songs.json compressed in a zip file and uploaded to canvas
- ☐ URL for json.html online (choose github or siteground – not both)

URL: https://kailashfaris.github.io/cs120/hw6_JSON/json

Were there any problems in this assignment you could not complete?
yes__x__ no ____ If yes, please note:

I could not do problem 3 without hard coding the list of genres. For some reason, songs.json could not load until every other event, so I could not read the songs until after the page is loaded. This prevented me from being able to read through the list of songs to see what genres exist amongst all the songs.

Issue fixed by extending the \$.get method throughout the entire script! 😊

What are your thoughts about using JavaScript on its own vs Javascript with jQuery?

jQuery seems much more straightforward. It also seems to be more powerful in its ability to
